

MSc Project

Morenikeji Elijah Popoola(Student ID: 30121940)

Gantt Chart Outlining Project Timeline

Topic: Real-time Flood Prediction and Early Warning Using Machine Learning Techniques in Eastern Uganda

TASK	DESCRIPTION (Optional)	PROGRESS	START	END
Literature review				
Topic focused research by reading paper's on this area of study and their various methodologies to arrive at solutions, extracting key details.		10%	5/1/25	5/15/25
System Design & Methodology				
Define research methods		10%	5/16/25	5/17/25
Identify ML techniques to apply		10%	5/17/25	5/18/25
Choose datasets and evaluation metrics		10%	5/18/25	5/20/25
Plan data pipeline		10%	5/20/25	5/21/25
Design Client API (backend)		10%	5/21/25	5/23/25
Design UI/UX for website		10%	5/23/25	5/24/25
Implementation				
Data Collection & Preparation		0%	5/25/25	6/4/25
Model Development		0%	6/5/25	6/10/25
Software Development		0%	6/10/25	6/20/25
Testing & Evaluation				
Model evaluation (RMSE, MAE, R^2, etc.)		0%	6/21/25	6/26/25
System testing (unit, integration, user testing)		0%	6/26/25	6/30/25
Performance analysis		0%	7/1/25	7/3/25
Compare results with literature		0%	7/3/25	7/5/25
Conclusion & Future Work				
Conclude the project referencing literature review, explore future improvements.		0%	7/6/25	7/11/25
Potential Optional Enhancements				
Research/Development of low-cost rain-fall and river level sensors, prototype sensor hardware, build simple data collection framework, test sensor accuracy, integrate sensor data into pipeline.		0%	7/16/25	8/5/25

Project start: Fri, 6/1/2025

Display week: 1
